

The Future of Identity Analytics

IDENTITY ACCESS RISK SOLUTION

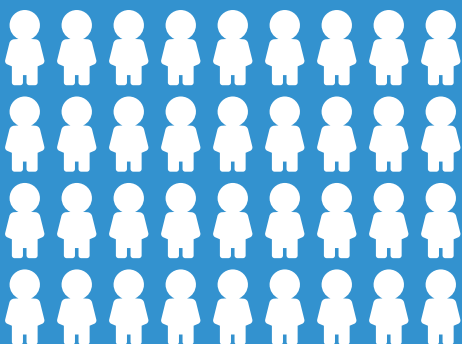

The Analytics tools to assist an Organization to find staff with access rights they shouldn't have within hours and with no prior business knowledge.

We give that information to the people who can do something with it – your staff – in a modern, intuitive user interface.

Most cyber fraud is committed by employees, and we know that protecting digital information is critical for modern companies.

How it works

STAFF ACCESS INFORMATION

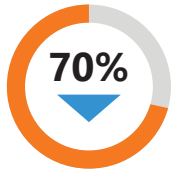

We analyze everything

DEPARTMENTS, ROLES & GROUPS WITH SIMILAR NEEDS

We deliver extraordinary results

Risk

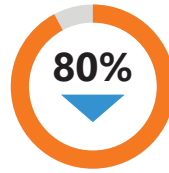

Finds 10% of staff with 70% of the risk

Delivery

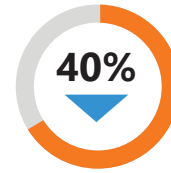

Implements in 5% of the time it takes competitors

Effort

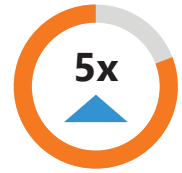

Only 1 in 5 access rights need review

Cost

Reduces volumes by 40%

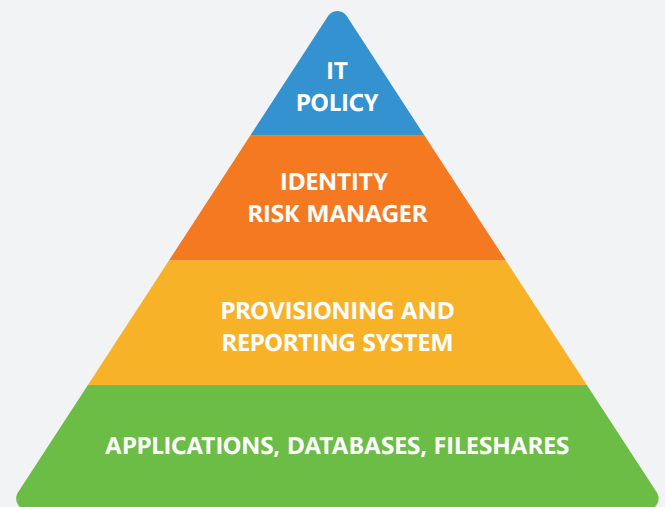

Automation

Increases rule automation by 5x

Our Solution

- We are specifically designed to fill the void between IT strategy and the provisioning of access.
- We give a single view across the organizations, then comply with information, audit, regulatory and oversight responsibilities.
- We show what access people currently have, what they SHOULD have and what they SHOULDN'T have, as well as the associated risk to the company.

Desktop app

- Get Staff Access Information.
- Analytics, calculate risk and highlight outliers.
- Reports, alerts for Business Intelligent.

Console app

- Build rules for each Asset in the organization.
- Reports, alerts for Business Intelligent.

Web app

- Monitor the risk of people in control area.
- Specific information on how to lower the risk through access management.
